App Design and Development Workflow

1 **Planning**

The purpose of the this first phase is to find out the scope of the problem and determine solution. Resources, time, benefits and other items.

2 **Systems Analysis & Requirements**

where system analysis takes place—or analyzing the needs of the end users to ensure the new system can meet their expectations.
3 **System Design**

The third phase describes, in detail, the necessary specifications, features and operations that will satisfy the functional requirements of the proposed system which will be in place.

App Design and Development Workflow

4 **Development**

The development phase marks the end of the initial section of the process. Additionally, this phase signifies the start of production. The development stage is also characterized by instillation and change.

5 **Intergration & Testing**

The fifth phase involves systems integration and system testing normally carried out by a Quality Assurance (QA) professional—to determine if the proposed design meets the initial set of business goals.

6 **Implemention**

The purpose of the this first phase is to find out the scope of the problem and determine solution. Resources, time, benefits and other items.
